Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-20, drawn to an electronic device, classified in class 257, subclass 751.
 - II. Claims 21-43, drawn to a method of manufacturing an electronic device, classified in class 438, subclass 653.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions [I] and [II] are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process, such as selectively depositing the low dielectric constant film to form the trench.
3. Because these inventions are distinct for the reasons given above and the search required for Group [I] is not required for [II]. The inventions have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
